

# SR

Comfort Air Curtain

**Biddle**

# A NEW WAVE IN CLIMATE SEPARATION

---

SR air curtains are the ideal solution for retailers and other end-users to combat the issue of climate separation across their outlet or office building doorway. The importance of accessibility to attract customers in the retail sector is well-known, but with this free form of access through 'open door' trading, cold draughts and high energy bills are often the consequence.

---

The SR technology has been designed to deliver greater comfort for all, whether it's in a supermarket, retail store or office building. The SR air curtain does not act as a barrier in the place of a door, its prime role is to reduce the amount of warm air leaving the building and condition the incoming air to a comfortable temperature. BSRIA and Biddle research produced documented evidence proving that air curtains operate best with specific velocities and air volumes. The SR air curtain satisfies these needs by delivering the right air flow and temperature at the right time automatically, reducing energy loss.

Furthermore, it is the only commercially available air curtain of its kind that now offers a unique air damper system to improve efficiency by controlling the outlet velocity.

Biddle has a great deal of experience in designing optimal climate separation solutions. The first step is to determine the climate requirement of the room, then in consultation with you we seek a suitable climate separation solution. By remote monitoring and intelligent software, Biddle is able to monitor and analyze the doorway and its energy consumption and comfort levels in detail.

# IMPRESSIVE RESULTS

---

The impressive results achieved by the SR are made possible thanks to a combination of four technologies. The revolutionary patented i-sense infrared technology collects all temperature-related data in the doorway. CHIPS technology translates this information into the correct setting, while the adaptable discharge width (Controlled Air strength technology) and the patented rectifier technology create the perfect climate separation.

---

## INTELLIGENT AUTO-ACTIVE CONTROL AND MONITORING

The auto-active control is the next generation of controls. Knowing that manual control of air curtains often leads to the incorrect setting, the inclusion of the automatic CHIPS (Corrective Heating & Impulse Prediction System) technology ensures the most appropriate setting at any moment in time. The i-sense in the discharge grille measures the indoor and outdoor temperatures active in the door opening, collecting real-time and accurate data. This auto-active control has been demonstrated to produce savings of up to 75% when compared with a manually controlled air curtain. Biddle has an extensive range of control options: the b-touch control panel, remote monitoring of comfort and energy performance and connecting to a BMS, which is easy through the standard integrated Modbus connection.

## FEATURES AND BENEFITS:

- Intelligent control and monitoring remotely
- Modbus integrated as standard
- Ability to capture and collect temperature data
- Stylish and low noise
- Complete customized solution
- Energy efficient and creating a comfortable environment
- Suitable for various heat sources
- Possible to combine with Daikin heat pumps and Biddle **air2air** heat recovery systems

## VARIOUS HEAT SOURCES

The SR can be supplied to suit many heating mediums with water, electric, Direct Expansion (DX) and ambient models all being available. The DX model is only suitable for use with Daikin VRV and ERQ Heat Pump systems.

## APPLICATIONS

The SR is designed for door heights from 3.3 m (80" to 130"). Within the retail, commercial and public sector the applications are endless. The SR can be applied above door openings of shopping malls, stores, supermarkets, banks, stations, museums, hotels and hospitals.

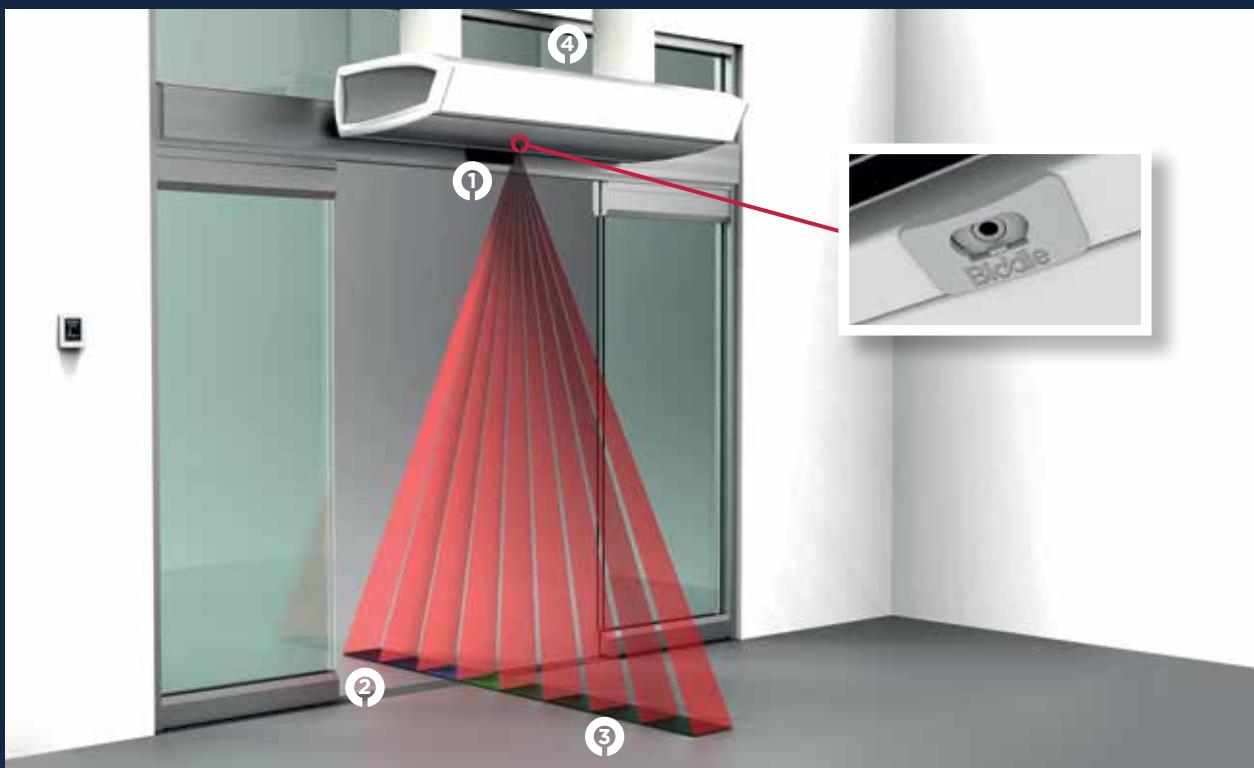

# i-SENSE INFRARED TECHNOLOGY

The patented i-sense infrared technology carefully scans the environment around the doorway collecting information on indoor and outdoor temperatures by measuring the exact temperature at floor level. In addition, the i-sense detects when the door is closed.

Outdoor and room temperatures are frequently used as a basis upon which automatic control settings are established. The temperature data is provided by a sensor located close to the device or attached to the building facade. This mechanism is not always reliable when it comes to measuring the exact climate prevailing in the doorway, resulting in the curtain operating on the basis of incorrect information. The SR however is different, as it is equipped with i-sense technology and the climate in the doorway is measured on an ongoing basis, thereby guaranteeing a comfortable environment as well as maximum energy savings.

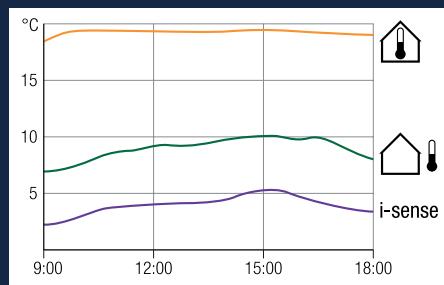

The i-sense (1) collects temperatures from several points both from inside and outside the doorway (2&3), while a sensor in the return air measures room temperature (4).

The automated CHIPS technology uses these temperature readings to determine the temperature and strength of the airflow that needs to be delivered, thereby guaranteeing the air curtain's performance. Air curtains that are equipped with auto-active technology are not only more efficient, but they also prevent energy being wasted due to incorrect settings. I-sense also recognizes when a door is closed and adapts automatically to the situation, preventing heat from being produced unnecessarily.

## EXAMPLE OF i-SENSE IMPACT

The graph illustrates how the outdoor and indoor temperatures are measured using i-sense. As demonstrated, the sensor located on the outside of the doorway estimates an outdoor temperature of 9 °C (48°F) (green line) while i-sense sensor in the doorway provides a reading of 4 to 5 °C (39 - 41°F) (purple line). This provides the evidence of accurate readings of climate conditions in the doorway measured by Biddle technology.

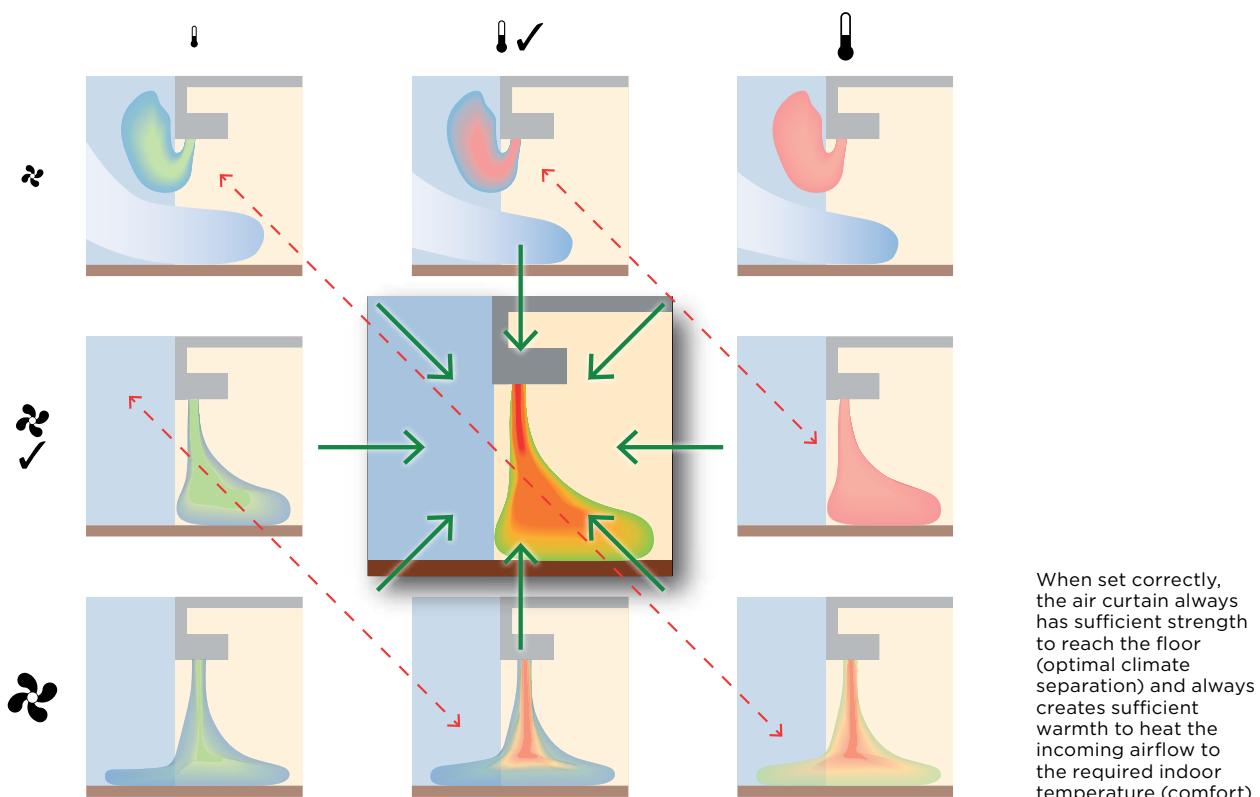

# AUTOMATIC CHIPS TECHNOLOGY

The Automatic CHIPS control strategy continually monitors and adjusts to provide the most effective and efficient operation by varying the strength and heating independently, to the point on the image below where 'sufficient heating' and 'sufficient strength' intersect.

The SR air curtain utilizes CHIPS technology to automatically adjust discharge velocity, air volume, discharge temperature and heat output. Outside, return air and discharge temperature sensors are used to determine how much heat is required and the bespoke control algorithm 'translates' the data into the strength (a combination of air volume and velocity) required for complete climate separation and comfort. Negating the need for the user to continually adjust the air curtain's setting when the inside/outside temperatures and/or weather change.

An air curtain with traditional control has heat and fan speed linked to one another. When the fan speed increases heat output will also increase, whether or not it's necessary, leading to a less effective and less efficient air curtain. The CHIPS control strategy continually monitors and adjusts air volume, air velocity, discharge temperature and heat output independently of each other so that the point on the image where 'Sufficient Heating' and 'Sufficient Strength' intersect.

## CONVENTIONAL AIR CURTAINS

With a convectional air curtain, both the heat and speed are usually linked to one another and when the fan speed increases, then it is probable that the heating also increases, resulting in a less effective or efficient air curtain. In contrast, Biddle's auto-active control treats both of these separately, ensuring conditions are always ideal and a maximum amount of energy is saved.

## RECTIFIER AND CONTROLLED AIR STRENGTH TECHNOLOGY

In order to achieve efficient climate separation, Biddle has created two separate technologies.

The patented rectifier ensures that the turbulent air from the fans is transformed into a virtually laminar air stream. The air stream reaches the floor with much less air speed than it would in a rectifier-free air curtain, while ensuring the discharge air stream stays within the building.

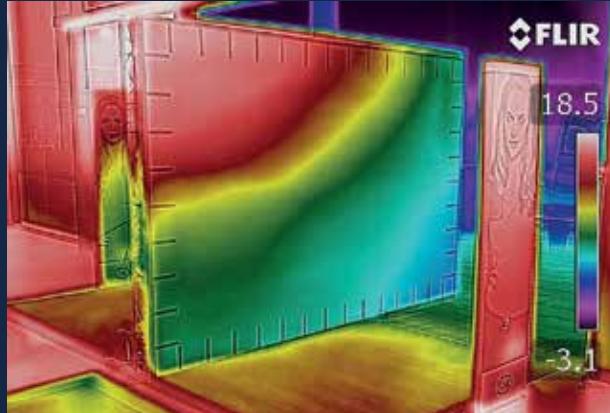

Controlled Air strength technology, on the other hand, ensures that the air stream reaches the floor containing the right volume of air, by calibrating air speed and outlet width.

At lower speeds (and hence lower air volumes) the damper partially opens to create a greater

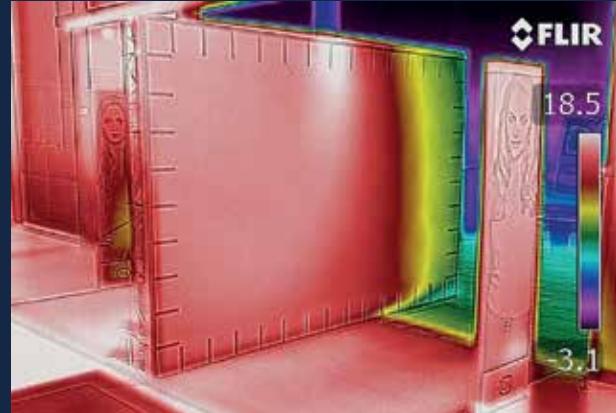

'impulse' to the air stream, providing a more energy efficient air curtain. At higher speeds the damper opens to adjust the outlet velocity to deal with more demanding situations.

In partnership with the TNO wind facility at Apeldoorn in the Netherlands, it is proved that combining these two technologies yields an 80% climate separation efficiency rate.

The thermographic images illustrated below show the temperature differences between the conditions prevailing outside and inside a doorway create air exchanges: warm air flows outwards, cold air flows inwards. This leads to both energy losses and a drafty indoor climate. The auto-active SR technology ensures energy-efficient climate separation.

Air curtain off: significant air exchange

Air curtain on: optimal climate separation

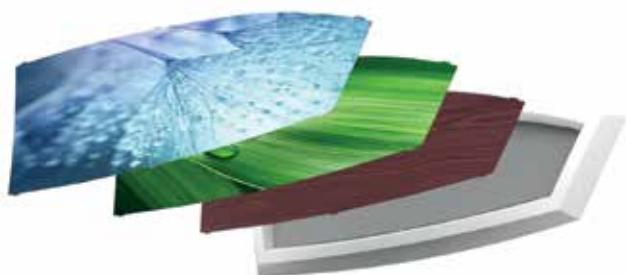

# SELECTION AND OPTIONS

The SR creates optimum climate separation in all doorways and is also suitable for a range of heating sources. There is a solution available for many monitoring and control options.

## EXAMPLE TYPE CODE: SR S-100-H3-F

SR	SR
Capacity	
S	Small 200-240 cm (80"-95")
M	Medium 220-280 cm (85"-110")
L	Large 250-330 cm (100"-130")
Length	
100 - 150 - 200 - 250 cm	
40" - 60" - 80" - 100"	
Coil type	
H3	Hot water heating
E	Electrical heating
DX (DK)	In combination with Daikin systems
A	Ambient (no heating)
Model	
F	Free hanging model
R	Recessed model
C	Cassette model

For the DX version a separate brochure is available.

Customised end panels with styled inlays.

## FOR EVERY DOOR WIDTH

Doors wider than 250cm (100") are covered by placing multiple units next to each other

## CUSTOMER-SPECIFIC STYLING

The inlays in the end panels are supplied in grey and white as standard. The removable inlays in the end panels can also be styled specifically if required (e.g. colour and logo).

## STANDARD COLOURS

Traffic white (RAL 9016) with accent end panels in Silver Grey (RAL 9006)

Silver Grey (RAL 9006)

Other RAL classic colours available on request

## SELECTION CONSIDERATIONS

An air curtain functions correctly when it shields the whole doorway and possesses sufficient heating capacity to warm the incoming cold air. Installation height, door width and the volume of natural ventilation are key when it comes to making the right choice. The table shown below provides relevant indications. The volume of natural ventilation in the building will determine whether the situation is favourable, normal or unfavourable.

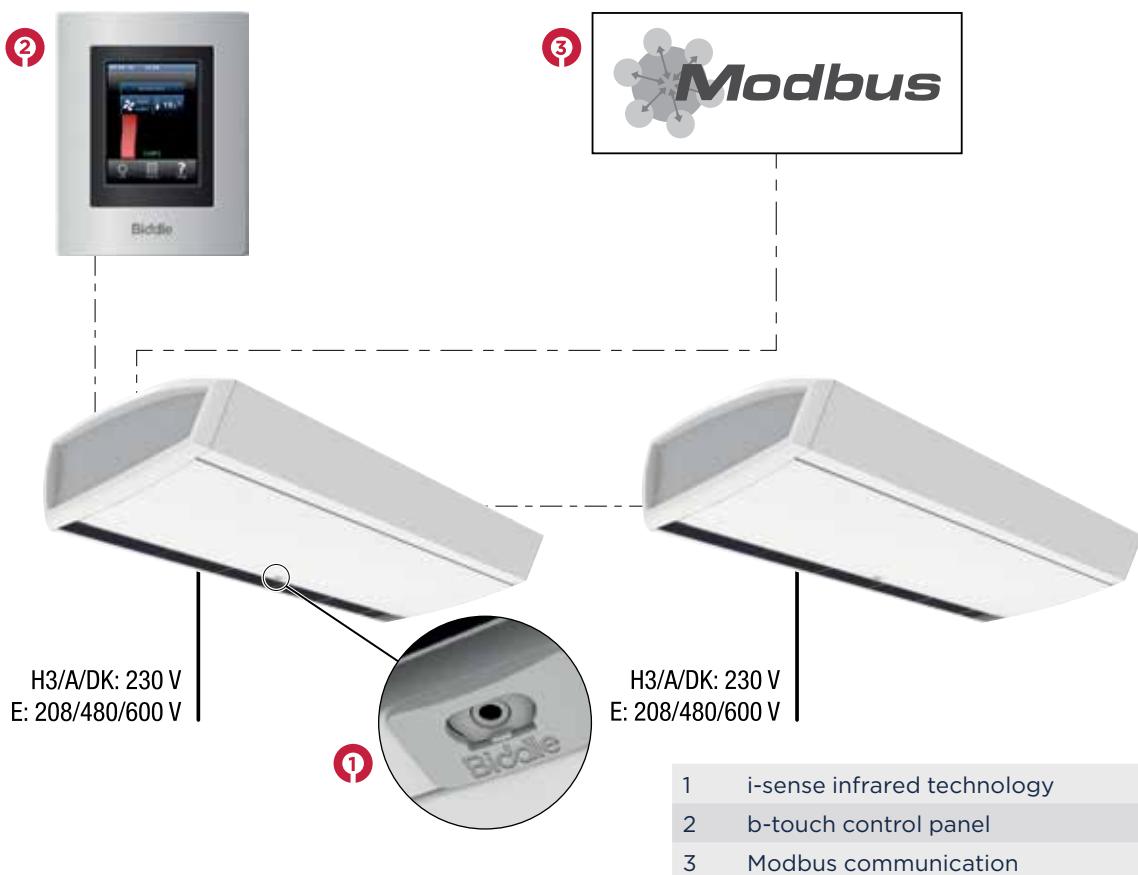

Type	Situation					
	Favourable		Normal		Unfavourable	
	Door height					
S	cm	in	cm	in	cm	in
S	<240	<95"	<220	<85"	-	-
M	<280	<110"	<250	<100"	<220	<85"
L	<330	<130"	<300	<120"	<280	<110"

# INTELLIGENT CONTROLS

During installation, an air curtain is typically set to operate at a mid-speed setting and rarely adjusted. This results in the air curtain continually operating at a single air volume, velocity and temperature. However, as internal and external conditions constantly vary throughout the day this means the air curtain will only be operating at the optimum setting some of the time and for the rest of the time will be either set too high or too low.

The automatic CHIPS (Corrective Heating & Impulse Prediction System) technology ensures the most appropriate setting at any moment in time. The i-sense in the discharge grille measures the indoor and outdoor temperatures active in the door opening collecting real-time data. This process ensures that the SR is always functioning correctly and yields an ideal, energy-efficient indoor climate without the need for user input.

The auto-active SR device is equipped as standard with the b-touch control panel and i-sense infrared technology. It is also possible to communicate via Modbus, the latter of which is a standard feature on all units.

# B-TOUCH

The b-touch control panel has a simple menu structure making it very easy to select preferred settings, such as room temperature and switching the device on/off. Due to the fact the SR's intelligent software is integrated, once the device is installed, it may also function without the b-touch being connected. The b-touch may then be used as a service panel only.

The b-touch can also be used as a component of a complete climate system. For instance, the Modbus BMS local operations via the b-touch and central management actively functions simultaneously. A single b-touch can be used to control a maximum of 10 units.

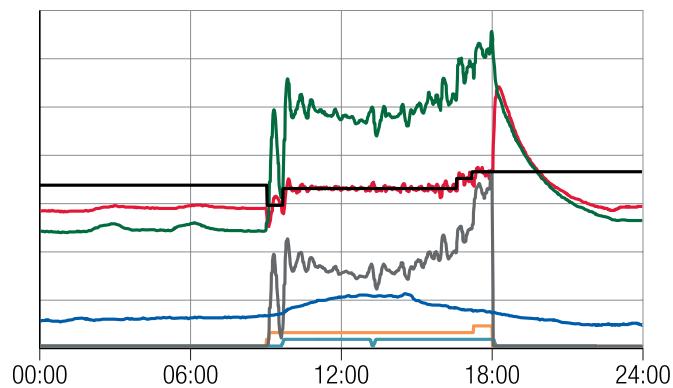

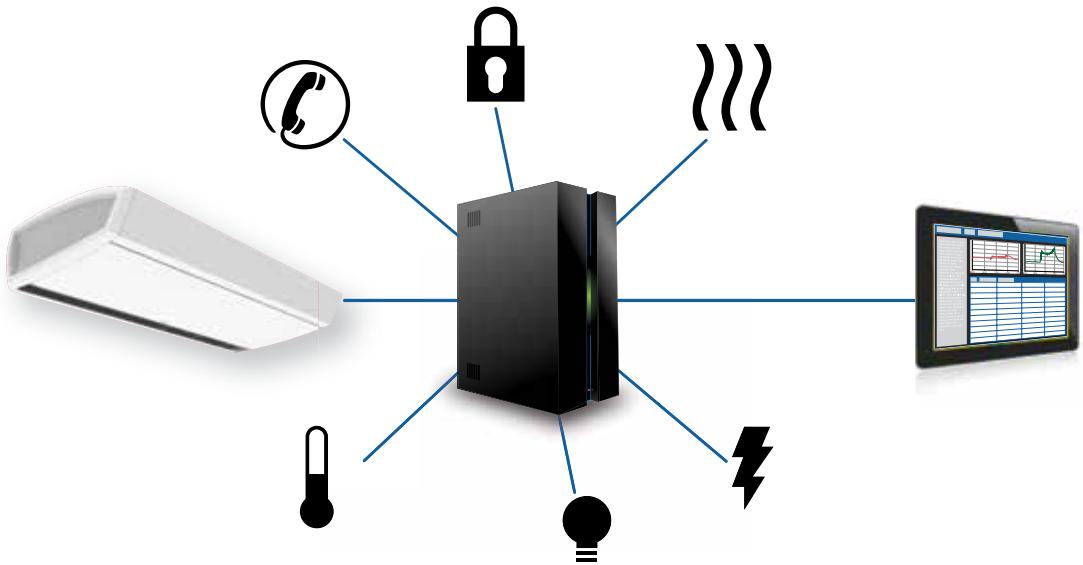

## CONTROL FEATURES:

- Touchscreen control panel
- Analytical tool
- Status screen displaying all settings and current values
- Multilingual navigation menu
- Practical installation wizard to achieve preferred settings on site
- Personalization features
- Manual operation also possible

## ANALYTICS

A USB connector is located on the underside of the b-touch for exporting data usage, importing or exporting adjustments as well as updating new software. The graph, produced from exported data, shows the degree of comfort by comparing the actual (red line) and programmed indoor temperature (black line) from a particular project installation.

## MODBUS COMMUNICATION

The SR comfort air curtain is easy to connect to a building management system using the standard integrated connection for Modbus communication protocol. Modbus can create communication between several products within the same network.

A building management system (BMS) is used for the central monitoring, control and communication between the products and controls present within the building. With the Modbus communication protocol all functions of the SR can be monitored and controlled remotely. After installation, interaction with the SR is remotely or locally adjusted in line with the needs of the customer. In this way the SR is continuously monitored and adjusted where necessary to optimize operation.

In the Modbus communication protocol, responsibilities with regard to local and central operation can be set. If required, both the b-touch and Modbus can be used in parallel allowing local and remote control of the air curtain.

The SR air curtain can also be made suitable for Bacnet communication.

# SPECIFICATIONS

## Q CASING

The casing is made of zinc plated sheet steel and has an inspection panel in the bottom. The inlet grilles are made of anodized aluminum with fixed fins. The inlet module, end panels as well as the casing are, as a standard, supplied in silver grey (RAL 9006) or traffic white (RAL 9016). The end panels of the white SR have a grey inlay. Other RAL casing colour finishes are available for an additional charge.

## Q FAN / MOTOR ASSEMBLY

The air curtain is equipped with two or more (depending on type) dual-inlet, vibration free suspended centrifugal fans. Each fan is driven by a rotor motor on bearings, which are seal for life and no maintenance is required. The fan casing and the impeller are made of zinc coated plate steel. The motors, as standard, are fitted with thermal contacts. These thermal contacts break the circuit of the motor when the maximum permissible motor temperature is exceeded.

## Q HEATING COIL

**Water:** made up of 3/8" (S/M) and 1/2" (L) copper tubes and aluminum fins. The water connections are G1" female thread. The maximum operating pressure is 6 bar at 110°C. Higher pressure levels, up to 10 bar, are available upon request. The permissible pressure difference is with S / M  $\Delta p = 0.5$  bar, and with L  $\Delta p = 1.0$  bar.

**Electric:** made up of electric heating elements with aluminum fins. The exchanger is controlled by the electronic control unit and is fitted with overload protection. When the unit is switched off, the fans will continue to run until the heating coils have cooled off sufficiently.

## Q CONNECTIONS

To connect hot water and ambient units to the mains supply, they come with a fixed cable (approx. 2m long) with a molded, earthed plug. The pipework connections for water units and the connector plate are fitted on the top of the unit.

The mains cable to electrically heated units must be connected within the unit. The top of the unit has a cable gland for feeding through the mains cable. A 5-core cable (3 phases + earth + neutral) is required for connection.

## Q STANDARD DELIVERY

Water-side control: 3 way valve and control (water unit)

Modbus communication

Air filters

Ceiling mounting brackets

Duct connections R-model  
(ducts not included)

## Q OPTIONAL ACCESSORIES

Filter sensor

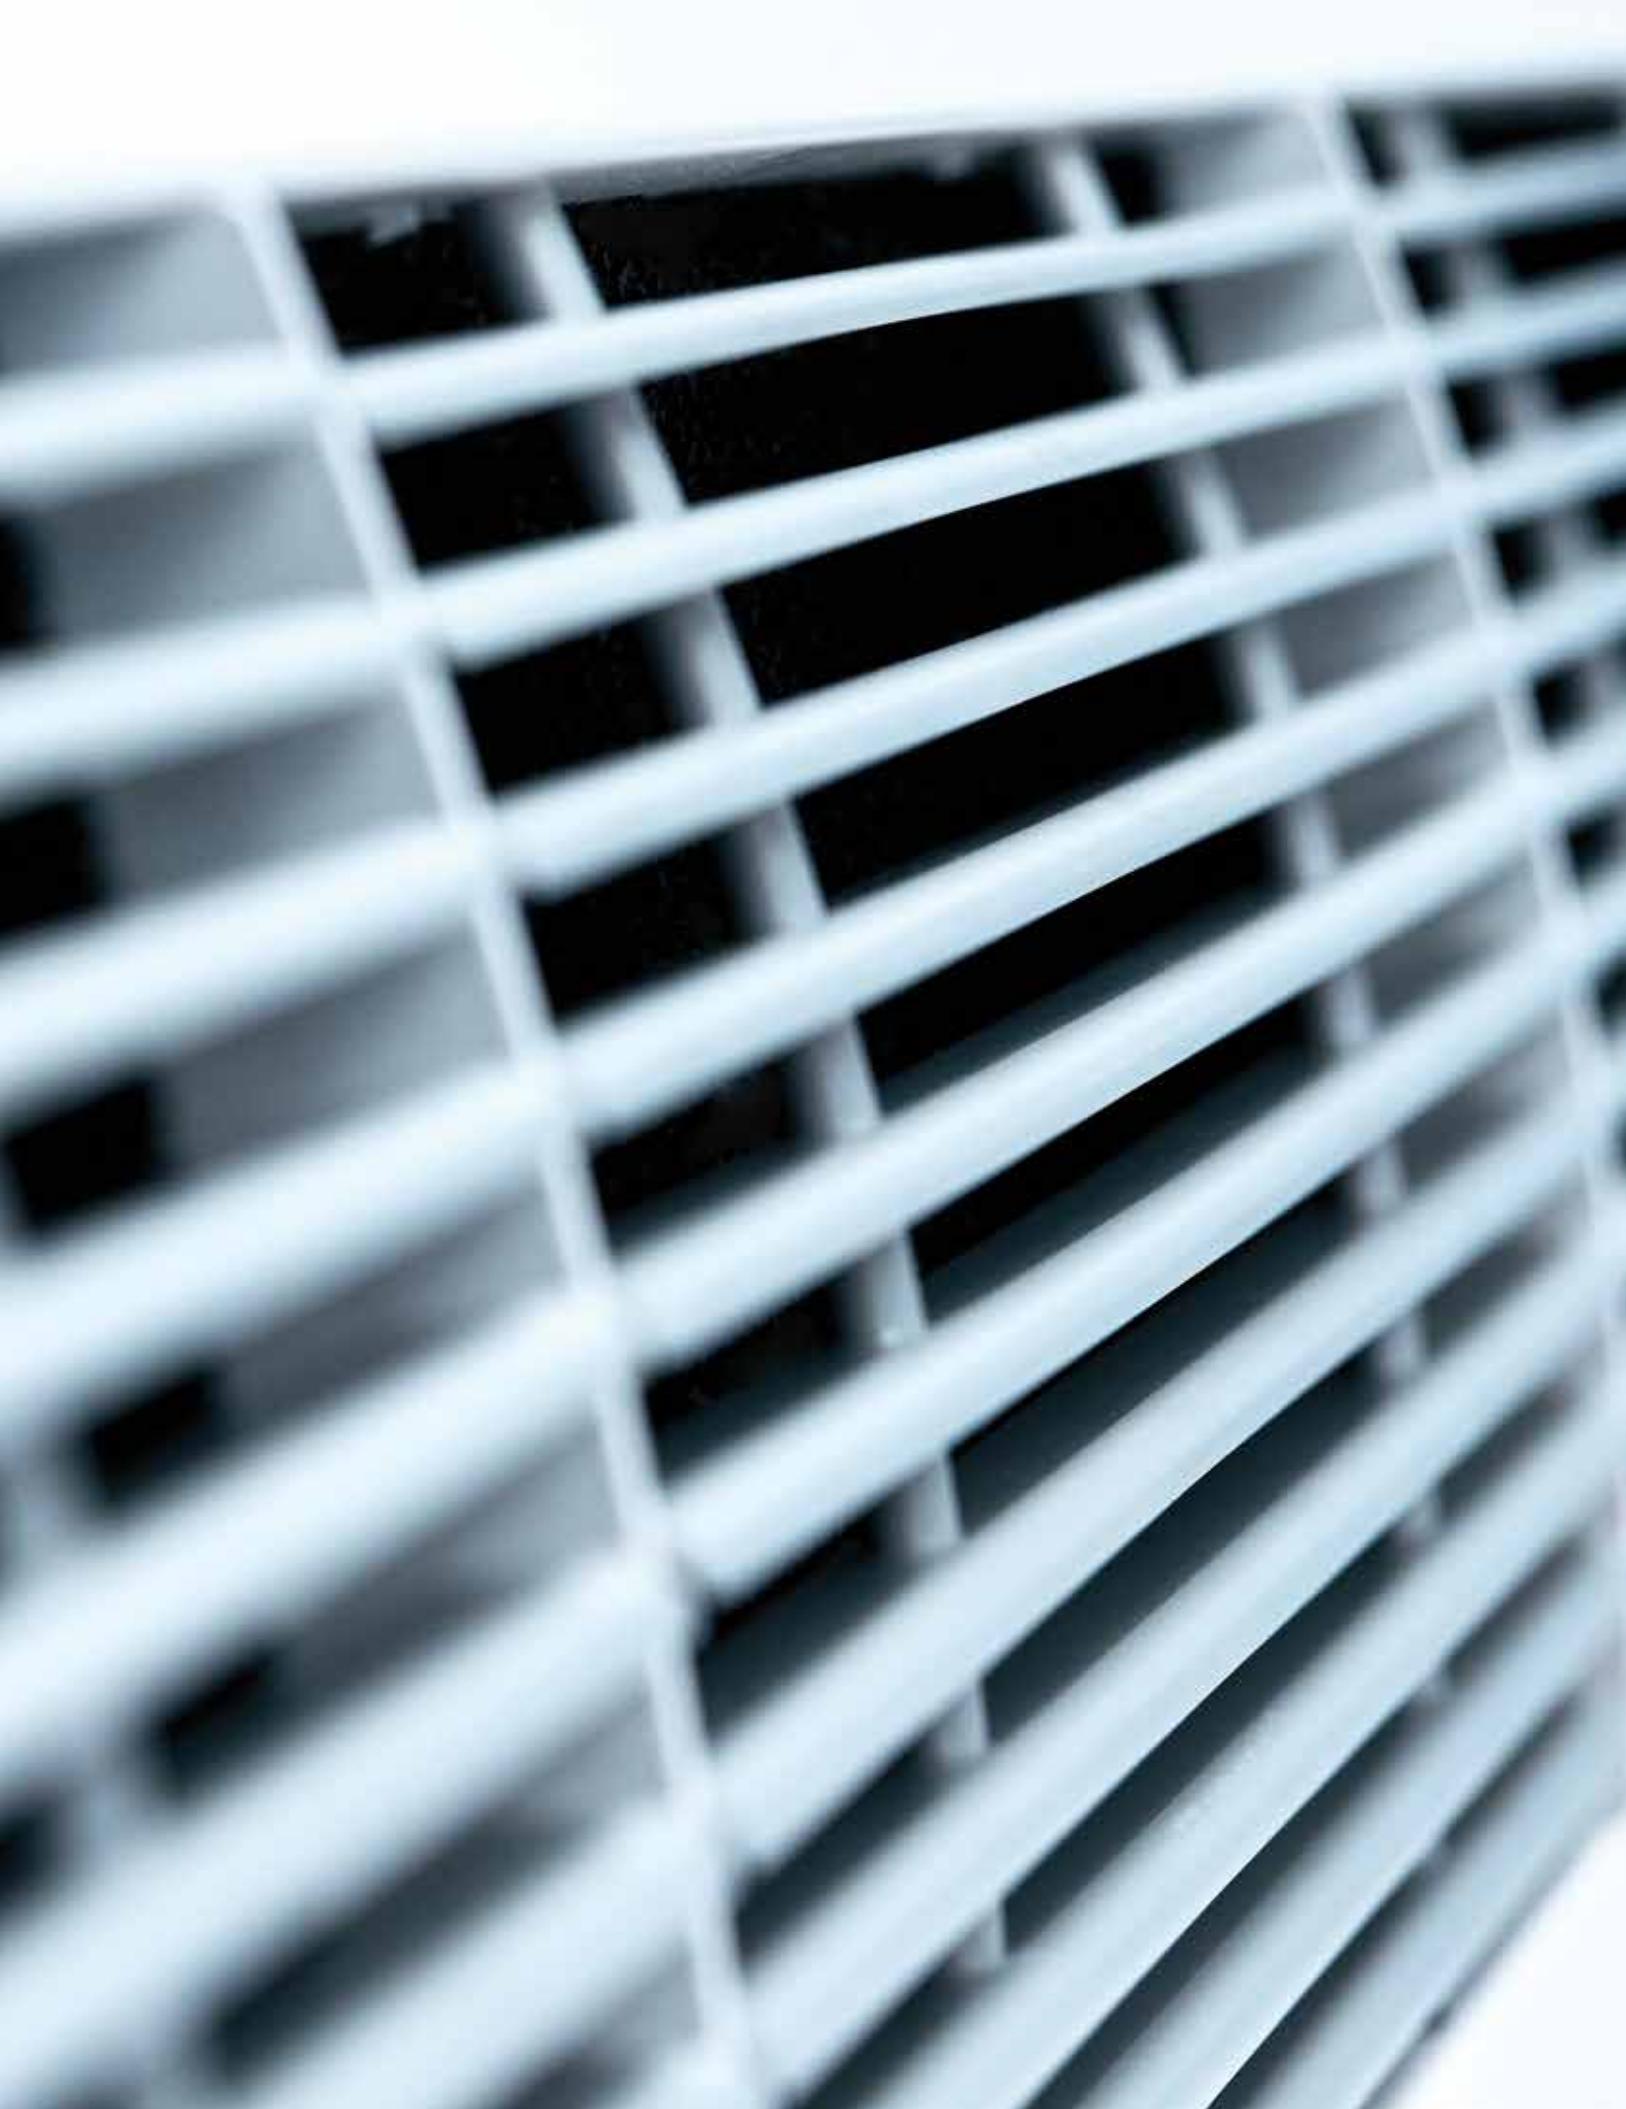

Wall mounting brackets: standard and design

Threaded rod covers

Door contact switch

External outdoor sensor

M8 threaded rods

# SR

Technical Details

# TECHNICAL EXPLANATION

---

Because of the auto-active control of the SR comfort air curtain the outlet temperature varies at all speeds, depending on the situation. The SR is equipped with a low water temperature coil for every water temperature from 45/35°C to 90/70°C (113/95°F to 194/158°F).

---

## SELECTION BOILER CAPACITY

For the selection of the boiler one can take the heating capacity at speed 6 at a discharge air temperature of 40°C (104°F).

## MAXIMUM HEATING CAPACITY

For the maximum heating capacity of water and electric units, the heating capacity has been taken at speed 6 with a discharge air temperature of 50°C (122°F).

---

## WATER VOLUME

The water volumes for water units are based on a water temperature of 80/60°C (176/140°F), a room temperature of 20°C (68°F) and an discharge air temperature of 40°C (104°F). With different values it is necessary to calculate the water flow rate using the formula below. The formula is also useful to determine the required water volume to achieve the necessary heating capacity or to determine the maximum heating capacity at a certain water volume.

$m_w$  = water flow rate [l/h]

$Q$  = capacity [kW]

$C_{pw}$  = specific heat of water (=4.18) [kJ/kg°C]

$\Delta T_w$  = temperature difference water [°C]

$P_w$  = density of water at 90°C (=0.984) [kg/l]

## WATER PRESSURE LOSS

If different water temperatures than 80/60°C (176/140°F) are concerned, the water pressure loss can be roughly calculated with the formula below. To do this the water volume flow rate should first be calculated (see left).

$\Delta P_{w1}$  = water pressure loss, table values [kPa]

$\Delta P_{w2}$  = water pressure loss [kPa]

$m_{w1}$  = water flow rate, table values [l/h]

$m_{w2}$  = water flow rate calculated using formula [l/h]

$$m_w = \frac{Q}{C_{pw} \Delta T_w \rho_w} \cdot 3600 \text{ [l/h]}$$

$$\Delta p_{w_2} = \Delta p_{w_1} \left( \frac{m_{w_2}}{m_{w_1}} \right)^2 \text{ [kPa]}$$

# TECHNICAL EXPLANATION

## SOUND

The sound data is based on the direct field, in a situation with an open door and a sound absorbing ceiling. The sound data for different situations can be determined by adding the adjacent values to the table values.

Closed door	+ 1 - 2 dB(A)
Acoustical "hard" ceiling	+ 2 - 3 dB(A)

Deviating distances and several units next to each other can be calculated with the table below. Data from the 1 m (40") unit, measured at a distance of 3 m (120"), is the basic assumption. The factors apply to all types of air curtains.

## CORRECTION FACTORS FOR SOUND PRESSURE IN dB(A)

Distance		Total unit length											
m	in	m	in	m	in	m	in	m	in	m	in	m	in
1	40	+9,5		+11,3		+12,6		+13,5		+14,3		+15,0	
2	80	+3,5		+5,3		+6,5		+7,5		+8,3		+9,0	
3	120	0		+1,8		+3,0		+4,0		+4,8		+5,4	
4	160	-2,5		-0,7		+0,5		+1,5		+2,3		+2,9	
5	200	-4,4		-2,7		-1,4		-0,5		+0,3		+1,0

<b>SR L 250</b>	2500	370	940	125	200	2638

## EXPLANATION OF DIMENSIONAL SKETCHES

① Models

**Free hanging:** by removing the end panels, the units are easy to interlink.

**Cassette:** aperture sizes = (A+8) x (C+8) mm.

**Recessed:** aperture sizes:

- for air discharge (A+8) x (D+8) mm
- for air inlet: (A+8) x (I+8) mm. If the recessed model is to be built into a bulkhead, it is also available in a design that has no inlet air plenum or flexible ducts.

② Wall suspension brackets and threaded rod covers

- Material of threaded rod covers: zinc coated steel, painted, to a standard colour of RAL 9016 or RAL 9006.

③ Note

- SR 250 units have 3 suspension brackets. All other sizes have 2 suspension brackets.

## INDEX

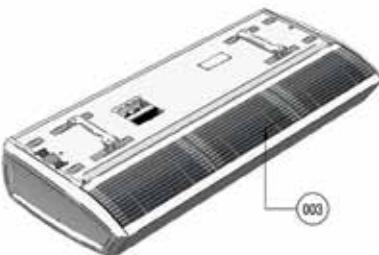

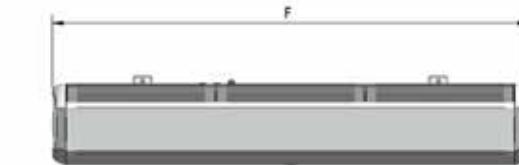

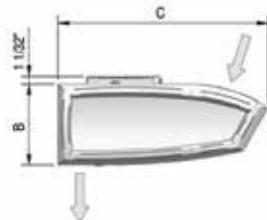

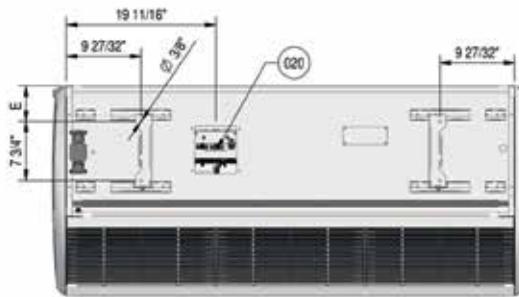

The corresponding numbers in the dimensional sketches are explained here:

3-Air inlet grille with filter. 20-Connection plate. 35-Ducts are not supplied. 43-Finishing sections supplied separately.

36-Eye bolt M6. 7-Air vent. 50-Gland. 97-Return (S/M). 98-Return (L). 99-Supply (S/M). 100-Supply (L).

12-Pipework. 87-Threaded rod covers (position is flexible).

## EXPLANATION OF DIMENSIONAL SKETCHES

### ① Models

**Free hanging:** by removing the end panels, the units are easy to interlink.

**Cassette:** aperture sizes = (A+8) x (C+8) mm.

**Recessed:** aperture sizes:

- for air discharge (A+8) x (D+8) mm
- for air inlet: (A+8) x (I+8) mm. If the recessed model is to be built into a bulkhead, it is also available in a design that has no inlet air plenum or flexible ducts.

### ② Wall suspension brackets and threaded rod covers

- Material of threaded rod covers: zinc coated steel, painted, to a standard colour of RAL 9016 or RAL 9006.

### ③ Note

- SR 250 units have 3 suspension brackets. All other sizes have 2 suspension brackets.

## INDEX

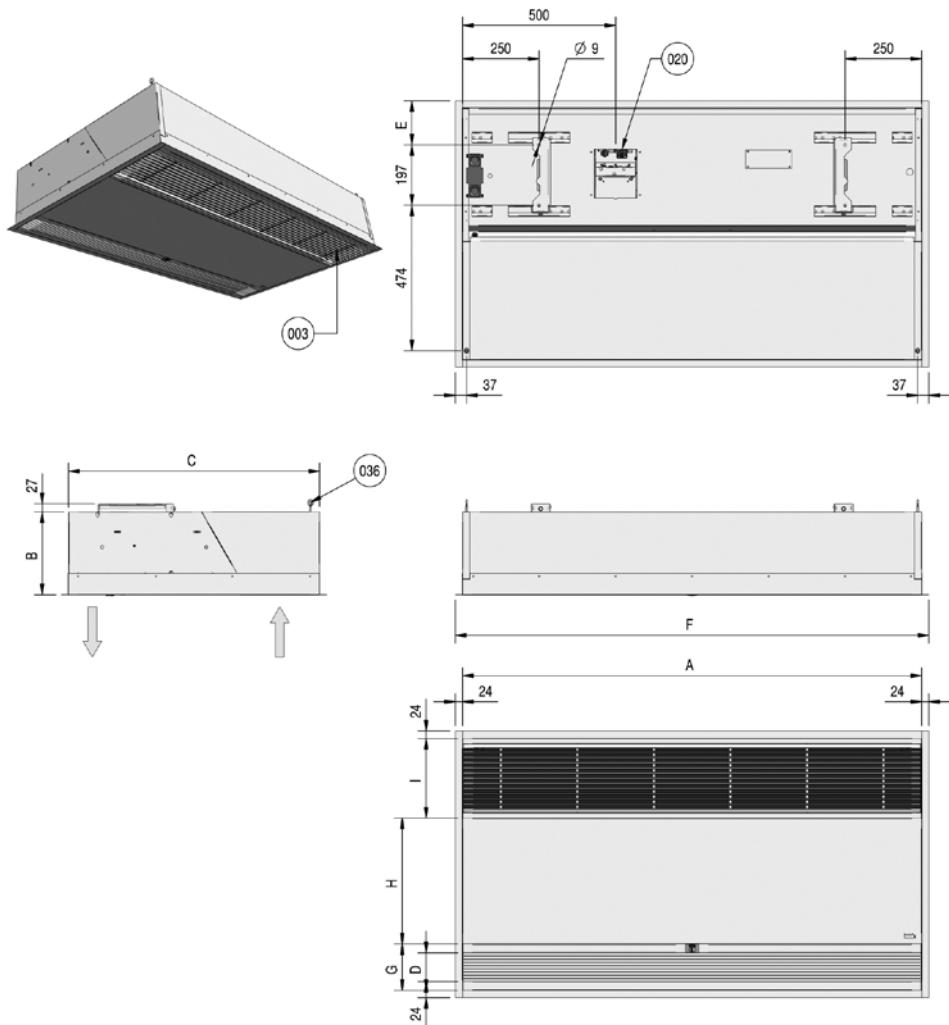

The corresponding numbers in the dimensional sketches are explained here:

3-Air inlet grille with filter. 20-Connection plate. 35-Ducts are not supplied. 43-Finishing sections supplied separately.

36-Eye bolt M6. 7-Air vent. 50-Gland. 97-Return (S/M). 98-Return (L). 99-Supply (S/M). 100-Supply (L).

12-Pipework. 87-Threaded rod covers (position is flexible).
